Pratt Institute Collaborates on Third + Bond Interiors

Third + Bond.

Rogers Marvel Architects; Marc LaRosa

Located in Carroll Gardens, Brooklyn, Third + Bond was designed by Rogers Marvel Architects as a modern adaptation of a traditional townhouse. The residential condominium consists of eight four-story townhouses with 44 residential units. Pratt Institute alumni, faculty, and students outfitted the interiors; the three-bedroom duplex features furniture fabricated in natural wood, glass, and metal, with home accessories by former Pratt faculty Eva Zeisel, industrial design professor and alumnus Bruce Hannah, architecture professor and alumnus Bill Katavolos, and alumni Harry Allen and Giovanni Pellone. The apartment is outfitted with GROW, an ivy-like solar and wind panel system designed by Pratt alumni and acquired by The Museum of Modern Art for its permanent collection in 2008. Elements of the two-bedroom floor-through model include designs made from natural and recycled/recyclable materials. A project of the Hudson Companies, Third + Bond is scheduled to be complete in the Spring 2010 and is expected to achieve a LEED Gold certification.
